TO WHOM IT MAY CONCERN

At HBK Architects we use only the brightest and most creative people alongside leading edge technology to deliver our quality services. With so much business now relying on computers, the risk of data loss is ever more serious and we place great emphasis on the security of both our own in house data and that of our clients.

To ensure no data loss we use a remote backup service from SME-BACKUP. Our data is automatically backed up to off-site servers every day removing the need for human involvement. This has already proved to be well worth the investment when our server decided to "not start up" one day. Within 15 minutes we had the critical files required for that day's work back on another computer and within 2 hours our whole system was restored again.
